

COMsolve

INTERFERENCE TESTING

Improve your network's performance and reduce dropped signals and calls by identifying and eliminating unwanted transmitters, and other sources of interference.

WHY CHOOSE COMSOLVE

Experienced telecom, project management, and IT professionals who take responsibility for your project.

We guarantee successful implementation based on strict industry quality standards.

With today's RF environment becoming increasingly complex and densified with new standards over legacy technologies, network performance and capacity can become quickly crippled by interferences from unexpected or unauthorized transmitters.

COMsolve's highly trained auditors can locate unwanted interferences and troubleshoot solutions to reduce network congestion.

INTERFERENCE TESTING OFFERINGS

RF INTERFERENCE PINPOINTING

When unexpected or unwanted signals interfere with network operations or operational quality, our RF interference pinpointing services can accurately locate the sources of signal disruptions. Resolve your interference issues, enhance network performance, and ensure reliable connectivity.

RF INTERFERENCE MAPPING & CONSULTATION

Know the areas affected, and gain solutions to increase network performance. We provide a detailed visualization of interference sources and their impact on wireless systems. These services offer expert guidance to optimize network performance, reduce disruptions, and ensure efficient spectrum usage.
